The comprehensive control office was established to conduct monitoring and control of power plant facilities and industrial water supply facilities etc. operated by public corporation bureaus in one place and started operation in April 2001. The supervisory control apparatus using the electronic computer is duplexed to improve the reliability.

At this control office, the operation of each hydropower station, monitoring of the condition of rivers and dams, monitoring and control of industrial water facilities and wind power plants are performed on a 24-hour basis, and then each facility is operated efficiently .
